Risk Assessment: Mobile Casino Event Provision

Company: Fun Casino Fun

Assessor: Jamie Silk

Task: Transport, setup, operation, and breakdown of fun casino tables and associated entertainment equipment.

1. Dynamic Risk Assessment Statement

As the precise location and room layout within the venue are often allocated on the day of the event, a Dynamic Risk Assessment will be conducted upon arrival. This operational protocol includes:

- Reporting to the venue manager or event coordinator upon arrival and following all venue staff instructions.
- Visually inspecting the allocated floor space for uneven surfaces, trip hazards, and adequate ceiling clearance before beginning setup.
- Ensuring casino tables, red carpet, rope barriers, and networking equipment do not obstruct marked fire exits, emergency escape routes, or fire extinguishing equipment.
- Adjusting the setup footprint dynamically to ensure safe crowd flow around the gaming tables.

2. Hazard Assessment Table

What is the hazard?	Who might be harmed?	Current Control Measures (How the risk is managed)
Manual Handling (Lifting heavy tables, chips, and gear from the vehicle to the venue)	Staff (Mainly Jamie)	• Use of correct lifting techniques. • Parking as close to the loading bay as permitted by the venue.
Slips, Trips, and Falls (Uneven floors, red carpet edges, trailing cables from Wi-Fi routers/hub systems)	Guests, Venue Staff, Casino Staff	• Equipment set up in designated areas away from main thoroughfares. • Any power cables or PoE injectors used for the local digital hub system are taped down securely or covered with cable ramps. • Red carpet edges are secured and checked for curling. • Immediate work area kept clear of empty boxes during operation.
Fire Evacuation (Obstruction of exits during a venue emergency)	Guests, Venue Staff, Casino Staff	• Prior to setup, fire exits and escape routes are physically identified. • Tables and rope/pole barriers are positioned strictly outside of these zones. • In the event of an alarm, dealing stops immediately and staff assist in directing players to exits.
Equipment Stability (Tables collapsing or heavy items falling)	Guests, Casino Staff	• Visual check of ceiling height and overhead lighting before erecting any tall equipment. • Guests are politely instructed not to lean heavily, place drinks on, or sit on the casino tables.
Public Behavior (Overcrowding or rowdy guests around tables)	Guests, Casino Staff	• Professional crowd management at the tables. • Use of rope and pole barriers to define the gaming area and control foot traffic flow. • If behavior becomes unsafe, dealing is paused and venue security/management is notified.

3. Declaration

I confirm that the above assessment is a true reflection of the general risks associated with the operation of Fun Casino Fun. Site-specific risks will be managed dynamically on the day of the event in cooperation with venue management.
